PROFESSIONAL EXPERIENCE

Senior Software Engineer | 2026 – Present

Redcat Hospitality Technology

- Led engineering team delivering technical design, strategy, and process improvements for hospitality industry solutions.
- Delivered end-to-end consumer-facing food ordering platforms across mobile, kiosk, and web, powering both in-person and online ordering experiences.
- Improved the accuracy of delivery orders and payments, ensuring customers receive the correct orders consistently.

Senior Software Engineer | 2025 – 2026

tes

- Automated Stripe payment reconciliation, improving financial accuracy and eliminating manual effort for schools.
- Served as Interim Tech Lead, overseeing technical planning, initiative scoping, and team leadership to ensure smooth product delivery with different technologies such as .NET, Springboot, Jetty, and NestJS.

Senior Software Engineer | 2024–2025

Education Horizons

- Built and maintained school operational software using React, NestJS, ASP.NET Core, and AWS while collaborating across product, design, and engineering — stepping up for tech leads, documenting key architectural decisions, and improving CI/CD pipelines with AWS CDK and GitHub Actions.

Software Engineer | 2023–2024

Education Horizons

- Built and improved finance features with a focus on real accounting logic and scalable architecture using modern full-stack technologies.
- Enhanced system reliability and DevOps with monitoring tools, AWS CDK, and GitHub Actions for smooth deployment and quick issue resolution.

Associate Software Engineer | 2022–2023

Education Horizons

- Built end-to-end finance features in a microservices architecture using React, Express, ASP.NET Core, and AWS to deliver real user value.
- Improved CI/CD workflows and rollback strategies with Git (Bitbucket), ensuring stable and continuous delivery of new features.

EDUCATION

RMIT University, Melbourne | 2020–2022

Master of Engineering (Robotics and Mechatronics Engineering)

- Final grade of GPA of 3.4 out of 4.
- Develop computer vision software and an ML model for dairy cow action recognition as a final year project.

University of Melbourne, Melbourne | 2017–2020

Bachelor of Science (Mechanical System)

- A team of 4 is developing a 3D CAD simulation for the Warman Competition 2020 as the final year project. The final design is predicted to be in the top 5 by a professional engineer.
